

Rx Pain Medications

KNOW THE OPTIONS • GET THE FACTS

Safe Disposal of Prescription Medications

Of the 4 billion prescriptions filled in the United States every year, **one-third of them go unused**. That's 200 million pounds of unused medications.¹

Unused medications should be disposed of as soon as possible to limit the possibility of illegal use.

Flushing or dumping down a drain is not the best way to dispose of medication. Sewage treatment systems can't remove all the medications from the water released into lakes, rivers, or oceans in your area.²

So what are the other options?

Medication "Take-Back" Programs

"Take-back" programs allow the public to bring unused drugs to a central location for proper disposal. Call your local government's trash and recycling service to see if a program is available.

In addition:

- The DEA allows you to mail back unused prescription medications to pharmacies and other authorized sites using packages made available at pharmacies and other locations.
- Most states have agency collection boxes overseen by law enforcement or pharmacies. Call the DEA's Registration Call Center to find box locations or other disposal sites: 1-800-882-9539, or go to <https://nabp.pharmacy/initiatives/awarxe/drug-disposal-locator/> or <https://www.deatakeback.com/>
- Community coalitions and law enforcement in your area may sponsor "medication take-back events" periodically.

Disposal in Household Trash

If these programs are not available in your area, place the drugs in the trash by following these steps:

- Remove them from their original containers and conceal or remove any personal information, including the Rx number, from the container.
- Mix the medications with something inedible, such as coffee grounds or kitty litter.
- Place the empty container and the mixture in a sealed bag or empty can.
